

# ENERGY CHAMPIONS FUND

## ECF Factsheet

### Fund objectives

The fund aims to generate long term capital growth by primarily investing in equities from companies offering exposure to the energy market.

### Fund facts

#### Investment manager

Independent Capital Group AG

#### Fund name

White Fleet II Energy Champions Fund

#### Legal status

Luxembourg SICAV with UCITS IV status

#### Base currency

USD

#### NAV calculation

Daily

#### Inception date

March 2014

#### Fund size

USD \$21m

#### Custodian

Credit Suisse (Luxembourg) S.A.

\*I2-Class since 12.9.2014, I1-Class since 01.12.2022, C-Class since 11.06.2024

### Monthly comment

Crude oil prices have declined since mid-January due to weak demand and U.S. trade concerns. New 25% tariffs on imports from Canada and Mexico, except for a 10% rate on Canadian energy, have added uncertainty. In a move that surprised many market participants, OPEC+ confirmed an increase in crude oil production of 138kboe/d starting in April. This marks the first in a series of planned monthly hikes aimed at gradually restoring 2.2mboe/d of production by 2026. Some producers, such as Kazakhstan, have already ramped up output, while additional barrels from Iraq's Kurdistan region could enter the market. This may contribute to inventory builds in the 2Q, depending on geopolitical developments, including increased pressure on Iran and the revocation of Venezuela's export licenses. Historically, OPEC miscalculated market conditions in 1998 and 2014, leading to higher inventories and lower oil prices. However, today's backdrop is different, with crude oil and petroleum product inventories remaining below average. On the other side, China's energy demand remains a crucial factor in global markets. According to the Sinopec chairman, the country's oil demand has not yet peaked, with petrochemical growth offsetting declines in diesel and gasoline consumption. Additionally, China is expected to announce a major economic stimulus at the National People's Congress to counteract rising trade tensions with the U.S.. Natural gas prices in North America have surged in recent months due to increased winter demand and expectations of rising North American exports. Indeed, Shell's LNG Outlook 2025 projects that global demand for LNG will rise by ~60% by 2040. This growth will be driven by economic expansion in Asia, the rise of AI, and efforts to reduce emissions in heavy industries and transportation sectors. The OPEC+ production increase negatively impacted energy stocks, with the S&P 500 Energy Sector Index declining by as much as 3.8%. Most shale producers saw their shares drop by over 5%. However, analysts believe this decline presents potential opportunities. While some companies may restrain production in response to an oversupplied market, the pullback could incentivize another round of M&A among public energy firms.

**ECF Factsheet**
**Financial statistics\***

Number of holdings	25
Market cap	\$31bn
P/E 2025E	7.0x
P/cash flow	2.9x

**February 2025**
**Why commodities**

Commodities have been key in the economic development of the world. Urban population is expected to grow globally from 52% to 66% by 2050. Urbanisation drives per capita wealth increase and with it the demand for natural resources. Middle class expands on a global basis, more than doubling by 2030 to reach >5 billion people. India and China show the largest increases with each reaching more than 1 billion middle-class citizens, China alone has the potential for 250 million people to urbanise in the next 10 years. By 2030, global middle-class consumption is expected to be more than \$63 trillion vs \$35 trillion in 2015. Demand for commodities remains continual, while they are becoming scarcer.

**Why natural resource equities and the Industrial Metals Champions Fund**

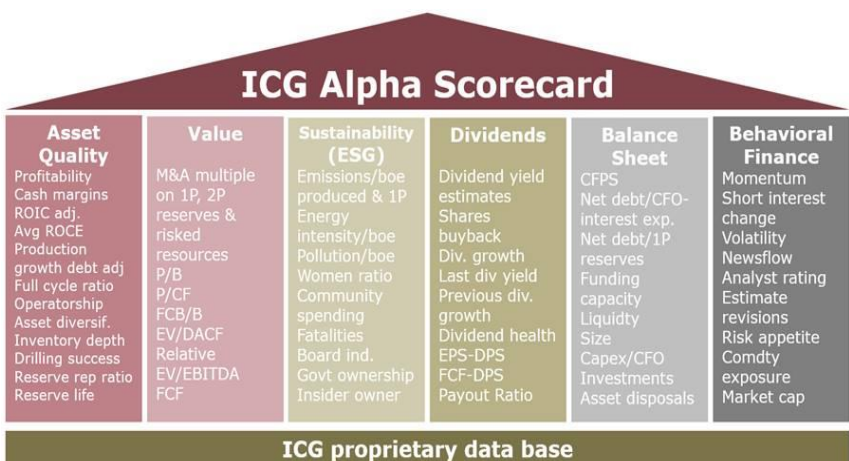

Natural resource companies are entering a phase of improving margins and the valuation is very low on a relative basis compared to the global equity markets. A portfolio of natural resource equities reduces firm specific risks while it increases the commodity exposure. The Energy Champions Fund offers the investor the opportunity to participate in an actively managed portfolio of energy companies active in the attractive oil and gas sector and this in a pragmatic sustainable way.

**ICG Investment Process**

Our investment process is based on a quantitative approach to find the best-in-class companies. The consistent methodological process is non-predictive with >90% of the analysis based on historical data. Our process has a portfolio view and helps to create a balanced portfolio instead of single stock bets. We developed a proprietary data base to better analyse financial and operating figures. Extensive data is used (>170'000 data points) to analyse trends across the industry and pinpoint sector champions. After defining the broad investment universe, selecting the best-in-class subsectors with the highest margins or most attractive investment opportunities, the universe is further filtered down to companies with significant subsector exposure.

**ICG Alpha Scorecard**

The ICG Alpha Scorecard is a quantitative and qualitative screening scorecard that pinpoints sector champions with strong economic «moat» based on different variables. The approach helps to identify companies with a relative good track record in different key financial and operational variables. The majority of variables are dynamic and based on historical figures from the last fiscal year or on a 3 year average. All 25 positions are equally weighted, however we may reduce the weight or even exclude a company on exceptional events (e.g. oil spill, political risk).

**Investment Manager**

The Energy Champions Fund is managed by Independent Capital Group AG, an independent asset management and investment advisory firm based in Zurich and Basel. Independent Capital Group AG has taken over the team of the commodities and energy investment boutique Gateway Capital Group in Basel in 2014.
